

ABOUT IGHA

India Green Hydrogen Assembly (IGHA)

The India Green Hydrogen Assembly is not simply a conference. It is India's most authoritative platform for the conversations, decisions, and collaborations that will determine the pace and direction of the country's hydrogen transition.

IGHA is developed by GH2 India — India's leading green hydrogen industry alliance, bringing together the full spectrum of stakeholders in the Indian hydrogen ecosystem: large industrial groups, innovative SMEs, technology companies, financial institutions, research bodies, and government agencies. GH2 India works at the intersection of policy, industry, and global investment to accelerate India's green hydrogen journey.

The inaugural IGHA takes place alongside Hyvolution India on 17–18 November 2026 at India Expo Mart, Greater Noida — anchoring India's most significant hydrogen event with deep domestic authority and institutional credibility.

WHAT THE ASSEMBLY DOES

FROM AMBITION TO EXECUTION — AT SCALE.

The IGHA Assembly is designed for a very specific purpose: to move India's hydrogen market from ambition to execution. Not through more announcements, but through the structured, outcome-driven dialogue that aligns policy, capital, and technology around real projects.

It is structured across three integrated formats — the Strategic Conference, the Technical Conference, and Leadership Roundtables — each serving a distinct but connected function. Together, they create an environment where the people who need to agree on something can actually do so — in the same room, on the same day.

THE PILLARS OF IGHA

STRATEGIC CONFERENCE

High-level dialogue on policy, investment, and market development — bringing together ministers, CEOs, investors, and international leaders. Formats include Leadership Keynotes, CEO Panels, Country Spotlights, Investment Talks, Fireside Chats, and closed-door CEO Roundtables.

Hydrogen is not just an energy vector — it is a catalyst for systemic change.

TECHNICAL CONFERENCE

Engineering excellence across the full hydrogen value chain — built for practitioners, project teams, and technology innovators who need answers, not headlines. The central question: how do we deliver hydrogen solutions that are efficient, scalable, safe, and commercially viable?

Engineering the Hydrogen Economy at Scale.

📍 INDIA EXPO MART, GREATER NOIDA (DELHI NCR) 📅 17- 18 November 2026

LEADERSHIP ROUNDTABLES

Invite-only, closed-door dialogues for CXOs, ministers, and senior decision-makers. These are the conversations that do not happen on a main stage — and that is precisely what makes them valuable. Each roundtable focuses on a specific challenge and is designed to produce alignment, not just discussion.

ABOUT GH2 INDIA

We are India's leading green hydrogen industry alliance, and we believe that the cleanest, most powerful fuel on earth can also be the great equaliser — creating jobs, cutting emissions, and putting India at the front of the global clean energy race.

We bring together the full length and breadth of India's hydrogen ecosystem. From large industrial conglomerates to innovative SMEs. From research institutions pushing the boundaries of science to financial bodies that turn ideas into investment. From startups with big ambitions to government agencies with the mandate to make change happen.

Together, we work with the Ministry of New and Renewable Energy (MNRE) and the National Green Hydrogen Mission — not just to talk about green hydrogen, but to actually get it deployed, at scale, across India.

Because green hydrogen isn't just a technology. It's a choice — a choice to build an India that runs cleaner, grows stronger, and leads the world.
